DETAILED ACTION

1. Applicant's amendment filed on, 7/20/02, has been received and entered.
2. Claims 1-17 are presented for examination.

Election/Restriction

3. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-3, drawn to a disk cartridge, classified in class 369, subclass 77.1.
 - II. Claims 4-6, drawn to a disk cartridge, classified in class 369, subclass 291.
 - III. Claims 7-17, drawn to a disk cartridge, classified in class 369, subclass 77.2.
4. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as a recess or protrusion in the cartridge and a recess or protrusion in the optical disk so that the degree of freedom in a radial direction of the optical disk is defined by the corresponding recess and protrusion (claim 4 lines 3-8). See MPEP § 806.05(d).
5. Inventions I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility such as a

shutter for opening and closing the openings wherein the first opening formed on one of the upper and lower faces of the cartridge case has a first opening region located in the vicinity of the center of the disk and a second opening region extending from the first opening region in a radial direction of the disk to the outside of the disk. See MPEP § 806.05(d).

6. Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as a shutter for opening and closing the openings wherein the first opening formed on one of the upper and lower faces of the cartridge case has a first opening region located in the vicinity of the center of the disk and a second opening region extending from the first opening region in a radial direction of the disk to the outside of the disk. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dzung Nguyen whose telephone number is (703) 305-9695. The examiner can normally be reached on Monday-Friday from 8:30 am to 6:00 pm.
